Cory Kidd

AI Strategy & Transformation Executive | Helping Mid-Market to
Enterprise Companies Deploy AI That Drives Business Results |
Founder, Advient Advisors

Berkeley, California, United States

Summary

I help executives turn AI from strategic priority into operational reality.

Over 25 years, I've built and scaled AI solutions across healthcare, maritime logistics, industrial manufacturing, and defense. My clients include Fortune 500 pharmaceutical companies, billion-dollar maritime operations, and multi-business-unit industrial conglomerates navigating complex AI transformations.

WHAT I DO:

- Enterprise AI Strategy: Identify high-ROI opportunities across your organization and build executable roadmaps
- Executive Education: Move leadership teams from AI skepticism to strategic deployment
- Implementation Support: Deploy AI solutions that work across operations, commercial, and corporate functions
- Market Intelligence: Design AI systems that integrate fragmented data streams into actionable insights

RECENT CLIENT OUTCOMES:

- Enabled \$1.5B company to maintain flat organization through growth by automating analyst functions and competitive intelligence
- Built AI-powered market optimization system for pharmaceutical manufacturer, integrating public and proprietary data for proactive resource allocation
- Designed transformation roadmap for multiple business unit industrial conglomerate to identify cross-portfolio AI synergies

BACKGROUND:

Founded two healthcare technology ventures. Three U.S. patents in AI conversation systems and behavioral interfaces. Ph.D. from MIT Media Lab in artificial intelligence and human behavior. Prior

experience includes board roles with multiple AI/robotics startups and strategic advisory to venture capital firms.

Industries served: Pharmaceutical & medical devices, maritime & logistics, industrial manufacturing, healthcare delivery, defense, & telecommunications.

WORKING TOGETHER:

I take on 6-8 strategic advisory and implementation engagements each year, ranging from focused executive workshops (\$25K-50K) to comprehensive transformation roadmaps and implementations (\$150K-500K+).

If you're exploring AI transformation, market intelligence systems, or cross-functional AI deployment, let's talk.

cory@advientadvisors.com

Experience

Advient Advisors

Founder & CEO

October 2024 - Present (1 year 1 month)

Berkeley, California, United States

Founded Advient Advisors to provide strategic AI advisory and implementation services to mid-market and enterprise companies.

Current and recent clients include:

- \$1.5B maritime/logistics company: AI strategy, executive education, and implementation of AI-powered competitive intelligence and operational optimization systems
- Major pharmaceutical manufacturer: AI strategy and roadmap; AI-powered market optimization platform integrating multiple data streams for resource allocation and forecasting

Services: Enterprise AI strategy, executive education, transformation roadmaps, hands-on implementation support

ENGAGEMENT MODELS:

- Strategic advisory retainers (starting at \$10K/month)
- Project-based implementations (\$100K-500K+)
- Executive workshops (\$25K-50K)
- Fractional CTO/Chief AI Officer roles (custom pricing)

TYPICAL OUTCOMES:

40-50% efficiency improvements | New revenue opportunities identified (\$10M-50M+) | 12-week implementation timelines | Flat organizational growth enabled

Industries served: Maritime & logistics, pharmaceutical & medical devices, industrial manufacturing, healthcare technology

Sigla Sciences

Chief Digital & Patient Engagement Officer

December 2023 - Present (1 year 11 months)

San Francisco Bay Area

Partner with pharmaceutical and life sciences companies to deploy AI-driven patient engagement and commercial optimization solutions.

Led major engagements including:

- AI Transformation Roadmap: Benchmarking, executive workshops, and 12-month implementation roadmap for mid-size pharmaceutical manufacturer
- AI-Powered Market Intelligence System: Built platform integrating the integration of public and proprietary data for real-time market optimization

Focus areas: Patient engagement technology, pharmaceutical commercial strategy, AI implementation in regulated environments, data integration and analytics

Strange Ventures

Partner and Chief Scientist

June 2025 - Present (5 months)

San Francisco Bay Area

Early-stage venture fund focused on deep software and AI opportunities.

Partner with inventor-founders building next generation computing infrastructure and AI applications.

Investment focus: AI infrastructure, enterprise AI applications, developer tools, applications of AI

Independent Advisor

Technology & Healthcare Advisory Board Member

January 2015 - Present (10 years 10 months)

Leading strategic initiatives and providing board-level guidance to innovative companies in healthcare, AI, and technology sectors. Leveraging extensive experience in AI, healthcare technology, and company building to help organizations scale and achieve strategic objectives.

Advisory Roles:

Cochener Garvey Capital Partners (2021-2024): Advising Board of Directors on growth strategy for Keycentrix, a portfolio company specializing in pharmacy software solutions

Ellipsis Health (2017-Present): Strategic advisor for AI-powered mental health assessment platform

Silicon Valley Robotics (2017-Present): Board Member of northern California's premier robotics industry association

Ambit, Inc (2019-Present): Advisor on quantum-safe networking and post-quantum encryption

Wikistrat (2017-Present): Senior Analyst providing healthcare and technology expertise

Key Achievements:

Guided multiple companies through successful funding rounds and strategic partnerships

Provided strategic direction for AI implementation in healthcare settings

Advised on product-market fit and go-to-market strategies for innovative healthcare technologies

Helped companies navigate regulatory compliance in healthcare technology

Facilitated connections leading to strategic partnerships and customer relationships

Core Focus Areas:

AI/ML Strategy and Implementation

Healthcare Technology Innovation

Product Strategy and Development

Strategic Partnerships

Regulatory Compliance

Company Scaling

Raisewell Ventures

Venture Partner

April 2024 - May 2025 (1 year 2 months)

Berkeley, California, United States

As a Venture Partner at Raisewell Ventures, I play a key role in driving the fund's mission to invest in transformative technologies across health tech, climate tech, and advanced manufacturing. My responsibilities include:

- Sourcing and evaluating high-potential investment opportunities in the US and Southeast Asia
- Conducting comprehensive due diligence on prospective portfolio companies
- Collaborating with the investment team to make strategic investment decisions
- Providing mentorship and advisory support to portfolio company founders, leveraging my experience as a serial entrepreneur

Drawing on my background as a Ph.D. in AI from MIT and founder of two venture-backed companies, I bring a unique blend of technical expertise and entrepreneurial insight to our investment process. My experience advising 15-20 startup companies further enhances our ability to identify and nurture promising ventures.

At Raisewell, we're committed to backing visionary founders who are addressing critical global challenges. I'm excited to contribute to this mission by identifying groundbreaking technologies and supporting the next generation of innovative companies.

Global MedTeam

Advisor

February 2024 - January 2025 (1 year)

New York, New York, United States

As an Advisor at Global MedTeam, I am excited to contribute my expertise to support the company's mission of connecting talented nurses from around the world with healthcare facilities across the United States. With a strong belief in the transformative power of global collaboration in healthcare, I am committed to helping Global MedTeam achieve its vision of a world where healthcare knows no boundaries.

Drawing on my extensive experience as a technology executive, founder, and fundraising strategist, I provide strategic guidance to help Global MedTeam scale its impact and reach. A key focus of my role is advising on fundraising efforts, leveraging my network and experience securing investments for high-

growth companies to help Global MedTeam access the resources needed to expand its platform and support more nurses and healthcare organizations.

Beyond fundraising, I offer insights on effectively leveraging technology, such as AI and digital platforms, to streamline the process of connecting nurses with opportunities and supporting their success. Having built and led companies like Catalia Health that pioneered new models for patient engagement and care management, I understand the power of innovative solutions to drive meaningful improvements in healthcare delivery and outcomes.

I am deeply aligned with Global MedTeam's values of trust, safety, integrity, empathy, professionalism, and social impact. I believe that by upholding these values and staying true to its mission, Global MedTeam can not only help address critical healthcare workforce needs but also transform lives and communities around the world. It is a privilege to be part of this impactful work and to support the Global MedTeam in empowering nurses to achieve their "American Dream" while advancing the quality and accessibility of healthcare for all.

Catalia Health

Founder and CEO

July 2014 - January 2024 (9 years 7 months)

As the founder and CEO of Catalia Health, I led the company's mission to revolutionize patient care management for those dealing with chronic conditions. Inspired by the powerful impact of AI and robotics technology I developed over more than a decade, including during my time as founder of Intuitive Automata, I started Catalia Health in 2014 to bring this life-changing potential to a wider patient population.

Under my leadership, Catalia Health built a groundbreaking platform that combined cutting-edge artificial intelligence, psychology, and medical best practices to deliver personally tailored, frequent interactions that significantly improved adherence and outcomes. Our AI-driven approach attracted major customers such as Pfizer, Novartis, and Kaiser Permanente across immunology, oncology, and cardiology. By integrating with both large and small specialty pharmacies nationwide, we extended our reach and impact even further.

During my tenure, Catalia Health raised approximately \$12 million from top investors including Khosla Ventures, Fusion Fund, and Ion Pacific. Our

work garnered significant recognition, with features in the New York Times, TIME Magazine, the Wall Street Journal, Wired, and Pfizer's annual report to investors.

With my MIT Ph.D. at the intersection of AI and psychology as a foundation, I'm proud to have guided Catalia Health in delivering tangible results for patients and partners alike. Our success in helping patients stay on therapy longer than without our programs exemplifies the immense potential of thoughtfully applied technology to advance healthcare outcomes and change lives for the better.

Fresco Capital

Impact Partner

December 2015 - January 2020 (4 years 2 months)

Provided help and support to Fresco Capital and portfolio companies. Fresco Capital is an early stage investment fund with a focus on creating maximum impact for our companies, investors, and partners.

7 Senses Labs, Inc. - Story-based Math learning for children from Space and Beyond!

Advisor

February 2015 - January 2019 (4 years)

Solbit is a family education robot based on STEAM (Science, Technology, Engineering, Arts, and Math) framework, with integrated camera and voice recognition with a cloud-based language library, whose primary mission to be the child's personal learning companion. In the morning, the child is warmly welcomed by Solbit, in the afternoon, Solbit reviews Math with the child and in the evening, Solbit reads a story with the child and then plays soothing music to put the child to bed. The initial target user are children ages 4 – 7 years old and the target buyer are their parents, generally in the age range of 25 – 40 years old.

Solbit is part of a game changing solution that enables children to have emotionally engaging life and skills-building learning experiences via learning games that integrate with our Robot, daily reminders that guide parents and integrated with Internet of Things (IoT) devices (e.g., sensors throughout the home) to complete the family experience.

Geppetto

Advisor

March 2017 - August 2018 (1 year 6 months)

San Francisco Bay Area

Advising an early stage company with an innovative new product in the robotics and AI area.

Naked Labs

Advisor

July 2015 - June 2018 (3 years)

San Francisco Bay Area

Naked is a 3D Fitness Tracker that gives you a holistic picture of your body and how it changes over time. Naked uses 3D scanning technology to track your shape, measurements, body fat %, and weight to give you unprecedented insights into how your lifestyle affects your health. Founded in early 2015, Naked Labs is committed to promoting health through honest insights.

12 Labs

Advisor

November 2014 - July 2017 (2 years 9 months)

San Francisco Bay Area

12 labs is a spinoff from the MIT Media Lab, and is funded by top Silicon Valley investors including Salesforce CEO Marc Benioff, and Google Health Founder Adam Bosworth. Our flagship product is the Applause health app.

Applause uses data science algorithms and behavioral psychology to make suggestions and predictions specifically for you. Being located in Palo Alto gives us access to the world's top talent in everything from engineering architecture to design and branding. We have a world class team building your ultimate fitness companion.

Weartech Inc.

Board Member and Advisor

September 2014 - July 2016 (1 year 11 months)

Philippines

With the advent of wearable devices come a slew of 'Quantified Self'. We developed an Aggregator Platform to put the data being integrated and aggregate into meaningful context. For example, steps, calories consumed, and deep sleep have to be contextualized to allow for better interpretation, better use, and possibly move towards providing a predictive capacity.

HAX

Mentor

January 2012 - December 2015 (4 years)

Shenzhen, Guangdong, China

HAXLR8R is a startup accelerator focused on getting hardware startups off the ground as quickly and efficiently as possible. Located in the heart of the world's manufacturing and electronics capital in Shenzhen, China, HAXLR8R is a leader in helping founders make physical things and turn that passion into companies. I have served as a mentor to the companies since the first iteration of the program, discussing our experience prototyping, building, and selling a new product with a significant hardware component.

IDEO

Startup in Residence CEO

December 2014 - April 2015 (5 months)

Worked for five months with the IDEO San Francisco studio as the Startup in Residence. Managed the Catalia Health team and interactions with many of our great IDEO colleagues during the time we were in the studio. Catalia Health worked with IDEO on designing our new robotic personal healthcare companion, on marketing and branding for the company, and on user experience design for our product.

IDEO is an award-winning global design firm that takes a human-centered, design-based approach to helping organizations in the public and private sectors innovate and grow.

IMATCHATIVE INC.

Consultant

January 2014 - November 2014 (11 months)

iMatchative is creating AltX, a state of the art, automated matching platform that provides hedge funds and investors with superior, more intelligent tools to use when searching for investment opportunities. My role is to translate the work of the psychology team into tools in the web-based product in order to effectively leverage the academic and research expertise within the organization.

Planet Labs

Consultant

January 2014 - September 2014 (9 months)

Planet is a satellite startup that has the largest fleet of commercial satellites in space as of mid-2014. Their goal is to provide the most current images of the entire earth to their customers. I am helping the team with ground station

operations -- finding and acquiring locations, assisting with the installation of antennas and dishes, and ensuring the ongoing independent operation of each satellite ground station.

Intuitive Automata Inc.

Founder and CEO

January 2007 - June 2014 (7 years 6 months)

Hong Kong and San Francisco

Intuitive Automata created artificial intelligence conversational interfaces to help people with long-term healthcare challenges. Our platform was designed to allow our coaches to create, build up, and maintain a long-term relationship with an individual. The first product that was delivered to patients was the Autom™ diabetes management and weight loss coach.

We started IA based on the work I did for my Ph.D. at the MIT Media Lab and Boston University Medical Center. Founded in 2007, the company took that academic work and turned it into a platform and product that enables long-term behavior change healthcare applications to be more effective.

AcceleratorHK

Mentor

2012 - June 2013 (1 year)

Hong Kong

AcceleratorHK is a three month startup accelerator program based in Hong Kong and focused on companies doing hybrid mobile development. I have served as one of the mentors to the companies since the program's inception.

Hong Kong Polytechnic University

Visiting Lecturer

2008 - 2011 (3 years)

I taught graduate-level courses on social robotics to Masters and Ph.D. students at PolyU. The interdisciplinary classes were housed within the School of Design and developed students' understanding of the intersection among computer science, engineering, psychology, and design. The courses were largely project-based, which meant that the semester concluded with students presenting novel robots that did something useful and interesting in the real world.

MIT Media Lab

Ph.D. Candidate

August 2001 - December 2007 (6 years 5 months)

My Ph.D. work at the MIT Media Lab focused on long-term human-robot interaction (HRI). The coursework I assembled ranged from AI to psychology to experimental design. I also spent much of my time in real-world environments to better understand and conduct hands-on studies of how technology is used and adopted or rejected. This included a year of observing interaction with simple social robots in elderly care facilities and three years in the Nutrition and Weight Management Clinic at Boston University Medical Center.

This work concluded with the successful defense of a dissertation on long-term HRI focused on healthcare applications of social robots. I conducted a randomized, controlled medical trial of a weight loss coach at Boston Medical that showed that this new interface was significantly more effective than existing programs for helping individuals adhere to a weight loss program.

MERL

Summer Intern - AI-Based Conversation

May 2003 - December 2003 (8 months)

During a six month period, I worked with researchers at MERL to test their work on conversational artificial intelligence through embedded conversational agents delivered with interactive robots. Using their software and hardware (MERL's Mel robot), I helped to develop a demonstration-based conversation between the robot and users and carried out extensive human-robot interaction studies to better understand the nature of this interaction.

This work led to a conference paper and a journal paper in Artificial Intelligence, a top AI academic journal.

Georgia Institute of Technology

Research Faculty and Lab Manager

May 2000 - June 2001 (1 year 2 months)

Continuing my previous work as a research assistant, I oversaw the construction, completion, and establishment of a variety of research projects in a novel, home-based research environment known as the Aware Home Research Lab. Housed within Georgia Tech's College of Computing and the Georgia Tech Broadband Institute, the Aware Home's research focus was specifically on aging in place applications of technology for seniors and included work in sensors, applications, deployment, and testing of these technologies.

As a research faculty member, I taught courses on related technologies, advised undergraduate students, and oversaw numerous senior research projects that were related to our areas of focus.

Georgia General Assembly House Of Representatives

Special Assistant

January 2000 - April 2000 (4 months)

Served as a legislative aid to Representative Curtis Jenkins.

Nortel Networks

Software Engineer Co-Op

1998 - 1999 (1 year)

Helped to develop software test suite for verification of the Access Node Express line of products. Also led the Nortel Co-op Council for the 50+ interns and co-op students per term.

Scientific Research Corporation

Software Engineer Co-Op

1996 - 1998 (2 years)

Assisted with the design and development of an operator user interface for the recreation of a foreign surface-to-air missile system to be used in US war games operations. Did design, implementation, and optimization of C code to run on a Unix and VxWorks platforms for real-time user interface updates to accurately reflect the original system. Integrated with radar system input to create appropriate on-screen outputs for the operators.
